Product Information Sheet

QHS-500

Hydrogen Sulfide Scavenger

Appearance:	Light yellow liquid	Density:	8.2 lbs
Odor:	Alcohol	Spec. Gravity:	1.011
Freezing point:	Below -20F	pH:	7.5-9
Flash point:	110F	Solubility:	Water

Quick Pump Ser. QHS-500 series products are a proprietary formulation designed to remove hydrogen sulfide from produced gas. These products will react with H₂S to form water stable byproducts that may easily be removed from the system. The waste product may be disposed of at any salt water disposal.

These products may be injected directly into the flow line or loaded into a contact tower. Typical treatment rates range between 0.3-0.6 gallons per day per ppm H₂S to be removed per million cubic feet of gas. Treating dosages are directly related to the amount and quality of contact time. See your Quick Pump Ser. Sales professional for specific application information.

Avoid all bodily contact. In the event of eye contact flush with fresh water for 15 minutes and contact a physician. Skin contact, wash with soap and water. Use these products in well ventilated areas. For more information regarding the QHS-500 products refer to the SDS sheets.

For pricing and specific information regarding QHS-500's, please contact your Quick Pump Ser. Sales professional.

QHS-500 series are available in 55 gallon non-returnable drums or in bulk.
